Improving work station efficiency is a major goal in modern plant and industrial planning. Demag KBK Jib Cranes offer new alternatives to standard I-Beam Jib Cranes. Through the use of a light weight jib boom, high quality mounting bearings and low running resistance load trolleys, the KBK Jib Crane has permitted up to a 40% increase in work station efficiency. When combined with a Demag DK Chain Hoist, DKM Manulift or one of our new Demag DBS Air Balancers, a KBK Jib Crane can form the basis for the improvement of in-plant handling to meet today's high production requirements.

The basic jib crane component is the Demag KBK 100, I or II track section; field proven for many years in Demag KBK Crane and Monorail installations.

The jib assembly includes a load trolley for the hoist, bumpers and end stops, cable sliders and capacity plates. All components, including the pillar, jib boom and wall brackets are mass produced to insure uniform high quality.

KBK Jib Cranes are designed for easy installation; in most cases in-plant personnel can install each crane in less than a day. Most crane orders consist of only three parts (less anchor bolts) for off-the-shelf delivery.

Low Headroom Jib Cranes are built to order in our Solon, Ohio facility.
